

## DNA Migrates With Language

As languages migrate from Russian and of Indigenous Russia they evolve.

In this region which I live the first people into the area would be the Zuñi (Y-DNA Q-M242), where 'ñ' is of the Spanish. They are ancestors of people which built stone houses. These people live in individualized communities called Pueblos, and speak which speak individualized languages. Though there are people more migratory of their Q-242 Y-DNA, their language spread in America much further, like Russian is infused into Russian indigenous population further west into Asia.

Next people into my region, are the Athabaskan, Navajo (Y-DNA C-M217 Cossack) The Athabaskan, was once a know language in Alaskan, which indigenous populations are leaning towards the English language. People have a tendency to gravitate towards a single language. During WWII many Jewish refugee scientists of various languages, gravitated towards Los Alamos (Spanish for trees, had forest fires burned it in 2000) , New Mexico, for the Manhattan Project, to scientists their language is from the Arabs, it is mathematics.

As then and now since scientists and genealogists have to share and put together information, the information is not kept secret for long. Knowledge is what nations state have for nuclear weapons, it was the infrastructure of nation pitching in which built the bomb. Pluto discovered by a backyard scientist, was turn into plutonium, but a method developed in Berkeley, California, where an electrical engineer of Polish descent built the first Apple computer they still call 'The Woz'.

They squeezed plutonium in New Mexico, and my hometown of Gallup, New Mexico could see the light from this fission experiment hundreds of kilometers away. This is the detonator for fusion of H to make He in Russia, as determined by the science of measuring the vibrations of the earth it produced.

One they put and Armstrong (Purdue, IN engineer) on the moon towards the end of moon landings a New Mexico geologist from Harvard core drilled the moon. They saw that Harvard got to step on the moon. With the Challenger blow-up, they did not listen to the engineer about o rings, they silenced him, and sent up a social-studies teacher. So of these social-studies teachers are not scientists, but can be identified as calling people liars and silencing free speech.

She was educated in Framington, MA where my Elliot family got started building a mill dam, which can be seen in north Framington, now called Saxonville. MA, USA. Being a teacher myself and of engineers. By doing the research, and owning three dotcoms, in order for social-studies people to be correct over a scientist is to silence

him. Changed the model so the silences could create their own deception. When you negate that which is based on genetic science and genealogy, by properly documenting like in a lab book, without documentation which supersedes, you are creating your own deceptions. Therefore it would be greater honor to be thought of as a bigger liar than Richard Nixon to the nation of the USA.

The Hispanic, Spanish speakers came to this region. Then the USA English speakers, the Mormons first, which the Navajo like they brought horses and did not drink alcohol, plus the Mormons consider indigenous Americans as a tribe of Israel.

Though most Americans consider speaking English as being American, most Americans including Donald Trump's red headed mother from the Scotland, Gaelic speaking, English is not their ancestral language my Elwald-Elliott line with it's Anglo-Saxon comes closest. Also there are elements in written Russian found in the English language. Such as from left to right, not like Chinese, Arabic, or Hebrew. The surname Scott, means being of the Gaelic speakers contains O & T where the C & K are interchangeable in English. DNA migrates with language, and the J-M172 of the surname Scott-Martin (bird) – Wilk (wolf) migrates as pagan Anglo-Saxon from the Russian speakers into America. The Athabaskan, of the Navajo-Apache, migrate from indigenous people of the Cossack, across Russia into Alaskan to Arizona-New Mexico, the Apache were into Mexico. The language spoken is of the Athabaskan of Alaska, which is also called Apachean.

DNA migrates from Russia(n) going west into the Americans, and indigenous going east into the Americans, where the Y-DNA Q-M242 languages are indigenous to America, the Athabaskan-Apachean Y-DNA C-M217 is of indigenous Russian, and the Germanic languages of the Americans have the Russian in them, which migrated to the west. Some of these people would be of the Jewish J-M172, like the Montgomery and Scott, the Graham of J-M267 English south side of Scottish Anglo Border.

Mark Stephen Elliott
